

TOPICAL PREPARATIONS

Topical methods allow the absorption of medicine directly through the skin and may help bypass potential side effects. Gels, creams, lotions, sprays, foams, and lip balm stick applicators.

ORAL LIQUIDS

Some patients have difficulty swallowing pills and oral liquid medication is just the answer for them. Medications can be flavored and some are available in effervescent powders.

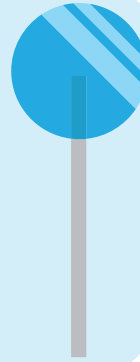

SUPPOSITORIES

Patients who are not able to take oral medications are ideal candidates for suppositories. These can be given vaginally, rectally, and urethrally and come in a variety of shapes.

TROCHES/LOLLIPOPS

For patients who are unable to take a tablet, troches and lollipops keep drugs in the mouth and quickly enter the bloodstream. Ideal for geriatric and pediatric patients.

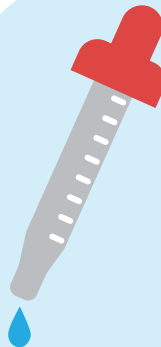

CAPSULES

Customized capsules allow alternate strengths or omitting allergens. Multiple medications can be combined to alleviate large quantities of pills. Vegetarian capsules are also available.

CUSTOM FLAVORING

Available for oral liquids, troches, and lollipops, custom flavoring can help give ease of medication delivery to even the finickiest of patients.

Hormone COMPOUNDING

ARE YOU FEELING UNBALANCED?

- Women of all ages can experience symptoms.
- Symptoms may include hot flashes, insomnia, PMS, weight gain, mood instability, and even infertility.
- Because each woman is unique, so are her hormone needs. Do not settle for hormone therapy that is indistinguishable from person to person.
- Seek relief specific to your needs with Bioidentical hormone replacement, prepared for you by a compounding pharmacist.

BIO-IDENTICAL HORMONE REPLACEMENT

- Uses plant-derived hormones that are identical to the hormones in your body.
- Are adapted to your body and hormone levels.
- Are customized based on the strength you need.
- Can be compounded into many dosages and forms including capsules, troches, suppositories and topical creams.
- Bio-identical hormones replicate what your own hormones and body has been doing naturally.
